April 20, 2021

ARRL is seeking an independent contractor or software development company to engage with a new transaction system in our Emergency Communications area. Ideally, one or more of the development resources will have experience with amateur radio.

The system will service data collection from Field Organization volunteers and establish a robust reporting system for field and Headquarters staff. The system must be cloud-based and developers must be proficient with the following technologies:

- MySQL database
- Apache web server
- XHTML/CSS
- PHP
- JavaScript
- SQL
- Python
- SMTP

There is no geographic requirement for this assignment; all meetings and user sessions can be conducted remotely.

Please respond with a profile or bio to ceo@arrl.org
