Our Cover

Jim Curran, K0ZB, designed his unique station to look like a submarine sonar console. The main console has three horizontal tiers of panels that are hinged at the bottom to allow each tier-segment to be tilted forward, giving access to the rear of the panels. The aluminum housing to the right contains all the electronics, and signals are wired in bundles over to the panels on the main console. Jim was first licensed in 1961 and has a degree in electrical engineering. The majority of his career in engineering was spent at Rockwell Collins in Iowa, working on avionics products.
